Software

Microsoft Internet Explorer 5.5 or later, File and Printer Sharing on Microsoft Networks installed.

Database Compatibility

Microsoft Small Business Manager is compatible with Microsoft SQL Server™ 2000 Desktop Engine (MSDE 2000) or Microsoft SQL Server 2000. Unless otherwise specified, SQL Server 2000 Desktop Engine is installed as the default database type. Consider the following MSDE 2000 attributes:

- MSDE 2000 uses one CPU.
- Each database has a 2-gigabyte (GB) data limit.
- Built-in scaling factors are included to limit the performance of MSDE 2000 based on connections and data loads.
- No built-in user interface exists for MSDE 2000.
- An MS-DOS-based, command-line version of Independent SQL (iSQL) is included.
- MSDE 2000 supports Microsoft Windows XP, Microsoft Windows 2000, Microsoft Windows NT 4.0 (Service Pack 6 or later), or Microsoft Windows 98.
- Integration with Windows Explorer and MapPoint requires Microsoft Windows XP.

To use an existing Microsoft SQL Server 2000 installation with Small Business Manager, you must use dictionary order, case-insensitive sort order.
